

## I-94 North-South Corridor Environmental Justice Analysis

### 3.3.3. Asian and Pacific Islander Population

Within Milwaukee County –

- Asians are less likely to be located within the quarter-mile corridor when compared to the county as a whole.
- Asians are located within the one-mile corridor at the same rate as the rest of the county.

Within Racine County –

- Asians are located within the one-mile and quarter-mile corridor at the same rate as the rest of the county.

Within Kenosha County –

- Asians are more likely to be located within the one-mile corridor when compared to the county as a whole.
- Asians are located within the one-mile corridor at the same rate as the rest of the county.

County	Entire County		One-mile Corridor			Quarter-mile Corridor		
	Population	% of Total Population	Population	% of Total Population	P-Value for Percent of Population	Population	% of Total Population	P-Value for Percent of Population
Milwaukee	28,930	3.1%	1,637	3.0%	-16.9%	547	3.6%	-78.0%
Racine	1,885	1.0%	8	0.4%	-13.2%	2	0.5%	-50.7%
Kenosha	1,930	1.3%	61	1.9%	77.4%	0	0.1%	-43.7%

# Asian and Pacific Islander Population Along I-94 Corridor

The corridor population is estimated by utilizing the Census 2000 population counts. This count is then converted into a population density based on the *SEWRPC Regional Land Use Inventory 2000* for each Census Block. The estimated population is then computed based on the amount of residential land within the I-94 corridor.

Population by race was taken from data indicating race alone or in combination with other races (Table P9 from SF1). As a result of these categories not being mutually exclusive, the population obtained by summing all of the racial categories may exceed the total population for any given area. It should also be noted that 'Hispanic' is an ethnic group and not a race category, and is expressed separately from race in the data. Thus, Hispanic persons are also White, Black, etc., in addition to being Hispanic. Total minority population was calculated as the sum of all non-white race groups, plus Hispanics indicating their race as 'White.'

## Three-County Region

## As Percentage of Total Population

The corridor population is estimated by utilizing the Census 2000 population counts. This count is then converted into a population density based on the *SEWRPC Regional Land Use Inventory 2000* for each Census Block. The estimated population is then computed based on the amount of residential land within the I-94 corridor.

## I-94 North-South Corridor Environmental Justice Analysis

### 3.3.7. Other Race Population

The other race population includes all other Census responses that were not included in the previously race categories. Respondents providing write-in entries such as multiracial, mixed, interracial, (without identifying the specific races) or a Hispanic/Latino group (for example, Mexican, Puerto Rican, or Cuban) in the “some other race” write-in space are included in this category.

Within Milwaukee County –

- Persons of other races are less likely to be located within the one-mile corridor when compared to the county as a whole
- Persons of other races are located within the quarter-mile at the same rate as the rest of the county compared to the county as a whole.

Within Racine County –

- Persons of other races are less likely to be located within the one-mile and quarter-mile corridor when compared to the county as a whole

Within Kenosha County –

- Persons of other races are less likely to be located within the one-mile and quarter-mile corridor when compared to the county as a whole

County	Entire County		One-mile Corridor			Quarter-mile Corridor		
	Population	% of Total Population	Population	% of Total Population	P-Value for Percent of Population	Population	% of Total Population	P-Value for Percent of Population
Milwaukee	48,227	5.1%	2,178	4.0%	-85.5%	697	4.5%	-29.0%
Racine	8,168	4.3%	16	0.8%	-99.8%	4	1.0%	-96.8%
Kenosha	5,990	4.0%	33	1.0%	-96.6%	9	2.0%	-90.4%

# All Other\* Race Populations Along I-94 Corridor

The corridor population is estimated by utilizing the Census 2000 population counts. This count is then converted into a population density based on the *SEWRPC Regional Land Use Inventory 2000* for each Census Block. The estimated population is then computed based on the amount of residential land within the I-94 corridor.

Population by race was taken from data indicating race alone or in combination with other races (Table P9 from SF1). As a result of these categories not being mutually exclusive, the population obtained by summing all of the racial categories may exceed the total population for any given area. It should also be noted that 'Hispanic' is an ethnic group and not a race category, and is expressed separately from race in the data. Thus, Hispanic persons are also White, Black, etc., in addition to being Hispanic. Total minority population was calculated as the sum of all non-white race groups, plus Hispanics indicating their race as 'White.'
