

DETOUR ROUTE TRAFFIC CALMING

The Wisconsin Department of Transportation (WisDOT) prioritizes safety on all roadways. When roads are closed, traffic is redirected to detour routes and unfamiliar streets. To enhance safety, WisDOT employs various devices to slow traffic and protect all road users.

Pedestrian Crossing Signs

During the project, vertical panel pedestrian crossing signs will be added at select crosswalks on the Oakland Avenue detour route.

Radar Speed Signs

Driver feedback signs will be placed on the WIS 32 detour route and nearby streets to help slow down traffic. They will give drivers a real-time view of their speed while reminding them of the posted speed limit.
