

Project Overview

The I-39/90 Project area extends approximately 45 miles from the Illinois state line to the US 12/18 interchange near Madison. This section of Interstate is experiencing significant traffic delays, especially during peak travel times.

In its current state, I-39/90 cannot adequately support the existing traffic, or projected increases, thus resulting in poor traffic flow and increased safety problems.

In order to address safety and congestion concerns, the Wisconsin Department of Transportation (WisDOT) will reconstruct and expand I-39/90 from four to six lanes and reconfigure 11 interchanges. Due to projected traffic increases in the Janesville area, the Interstate will be expanded to eight lanes for 6.5 miles from WIS 11 (Avalon Road) north to WIS 26.

Boater Awareness

During construction, the northbound and southbound bridges crossing the Rock River will be replaced. Please be alert for construction crews and work taking place in the river.

Navigational buoys have been placed in the river to guide boaters through the construction zone. This area is no wake and boaters are asked to take extra caution when navigating this area. Periodically, the buoys will be relocated in the river as construction progresses.

The inside diagram shows how to properly navigate this area.

For complete boater safety regulations and tips, visit the WDNR website at dnr.wi.gov/topic/boat/.
